RE-CARE
3 year warranty

REMAN PARTS

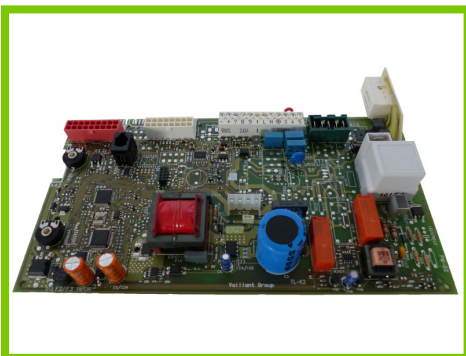

Reman Parts is a sales and distribution organisation of remanufactured domestic and commercial central heating boiler parts such as fans and PCBs (printed circuit boards).

We work in partnership with Inxeon, whose core competence's are the professional, comprehensive revision and remanufacturing of central heating boiler parts into a renewed life.

We believe in independent operating units like engineering, remanufacturing and sales to drive flexibility, efficiency and best performance. Each unit is different, and requires a clear focus on their unique capabilities.

By using remanufactured parts our clients demonstrate their commitment to Corporate Environmental Responsibility, whilst at the same time reducing their maintenance costs.

REMANUFACTURED INTO A RENEWED LIFE

Our parts are returned products, which undergo a professional and comprehensive revision process. Remanufactured parts aren't just repaired, refurbished or reconditioned.... remanufacturing is far more extensive than simply reworking parts. **Parts that are remanufactured into a renewed life are the equivalent to new, in terms of compliance with their original specification and performance.**

By using eco friendly remanufactured parts you support the re-use of materials, and the reduction of CO₂ output.

Remanufacturing is highly effective in contributing to a better and sustainable environment whilst at the same time reducing your maintenance costs.

**ECO
FRIENDLY**

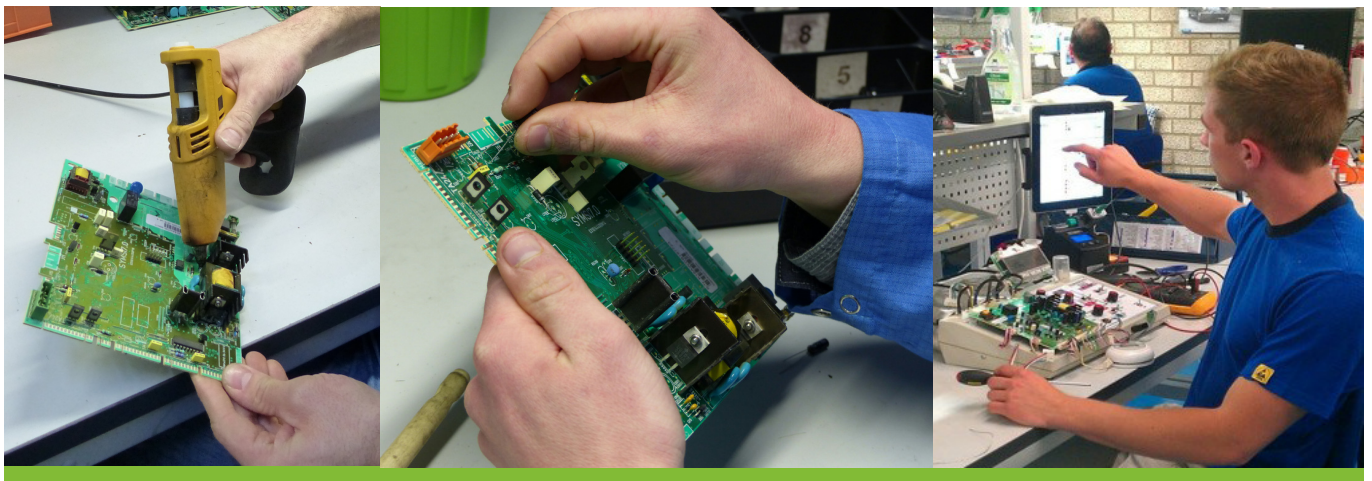

The days of throwing away remanufacturable parts are a thing of the past

We are confident in our performance and therefore we offer our remanufactured parts (fans and PCBs) with a **RE-CARE 3 year warranty** from date of delivery.

This warranty must be read in conjunction with our full terms and conditions of sale, a copy of which is available upon request.

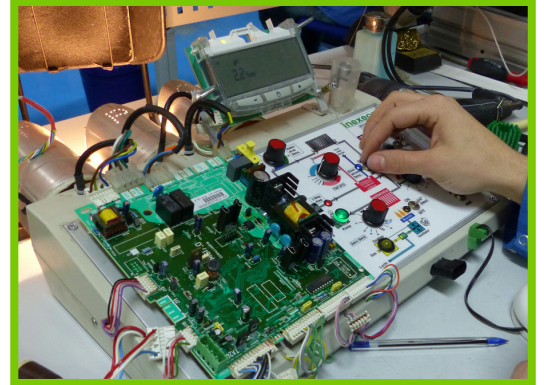

ADVANTAGES AT A GLANCE

- Eco friendly: the most efficient way of saving resources, energy, raw material, and labour
- Economical alternative: price advantage in comparison with a new spare part
- RE-CARE 3 year warranty
- Proven track record, more than 200.000 fans and PCBs already supplied to large contractors

THE PROCESS

During the professional remanufacturing process, all of the wear-sensitive parts are replaced, whether they are defective or not. The parts will be thoroughly inspected and cleaned in accordance with pre-defined procedures.

Each part will be subject to a 100% functionality test, in accordance with the original manufacturer's specification.

PROVEN TRACK RECORD

For several years now, most of the largest contractors in the Netherlands have been using tens of thousands of remanufactured parts annually to carry out their contractual central heating boiler maintenance work.

By using remanufactured parts the central heating boiler's technical life time can be increased, against an economically justified investment.

It's eco friendly, and reduces not only the central heating boiler's maintenance costs, but the overall ownership costs as well.

REVERSED LOGISTICS, CO-CREATED SUSTAINABILITY

For remanufacturing we need a reverse input flow of used and / or faulty fans and PCBs.

The remanufactured part's original box can be re-used to return the faulty part which, complete with the filled out return goods form, should be returned to your local distributor - or, in case of bulk returns, directly to our factory in the Netherlands. *A copy of the return goods procedure is available upon request.*

We can supply the parts with OEM labelling and packaging upon request.

**ECO
FRIENDLY**

YOUR PARTS REPRESENT ENVIRONMENTAL VALUE

We are interested in buying your defective or used fans and PCBs as they represent an environmentally friendly, and thus economical, value.

If you have used or defective fans and PCBs available on a regular basis owing to your boiler maintenance activities, or are considering collecting them via your engineers, please contact us to discuss further.

Please send us an email containing information about the boiler's brand, type, and quantity of used or defective fans / PCBs.

We recover as much of the economic value as reasonably possible, thereby reducing overall waste quantities and maintenance costs

PARTNERING, WE ALL BENEFIT

We work along side contractors, installers and merchants to ensure the best partnering solution. We are transparent and open. We listen to our partners and prioritise what we need to do, to maximise effectiveness and efficiency, so we all benefit.

We assist with and ensure the implementation of co-created reversed closed loop logistic solutions. Our partners have online access to stock level information, and orders can be processed by means of EDI upon request. We can manage your stock levels for responsive maintenance work purposes.

**The ECO friendly and
economical alternative**
